SUMMARY

Results-driven software engineer with experience owning the full software development lifecycle across enterprise and fast-paced environments. That ownership extends to architecting scalable REST APIs, containerized services, and secure IAM systems, while optimizing relational and NoSQL database performance to meet production demands. Experienced in delivering these solutions to production through CI/CD automation and high-availability cloud infrastructure, while aligning competing priorities among product stakeholders to keep initiatives moving forward. Early adopter of AI-assisted development, driving team-wide adoption of coding assistant tools to improve day-to-day engineering efficiency. Seeking Capital One's Technology Development Program to build on this foundation through cross-functional rotations, broaden my technical breadth, and grow alongside diverse engineering teams.

SKILLS

Frontend

- JavaScript, TypeScript, React, Next.js, HTML5, CSS3, Angular, AngularJS, Bootstrap

Backend

- Java, Node.js, Python, Express.js, Django, Flask, C#, Serverless framework, XML, JSON

Databases & Messaging

- PostgreSQL, MySQL, SQLite, Oracle Database, MongoDB, Firebase, Redis, BullMQ

Testing

- Vitest, Testcontainers, Supertest, Grafana k6, Mockito, JUnit

Cloud & DevOps

- AWS ECS, AWS Lambda, AWS Cognito, AWS Secrets Manager, AWS S3, Docker, Podman, Jenkins, Vercel

Project Management

- Git, Agile Scrum, Jira

WORK HISTORY

Software Development Engineer

July 2025 - Present

Swift

McLean, Virginia

- Led end-to-end development of one of Swift's first cloud-native web applications, translating cross-functional requirements into a solution that reduced quarterly support tickets by 14% since launch.
- Built and owned an automated CI/CD pipeline using Docker, Jenkins, and AWS to deploy and maintain 3 containerized services with high-availability redundancy for a customer-facing application.
- Designed, documented, and implemented an authentication overhaul of an enterprise administrator portal supporting 10,000+ users, modernizing the platform with secure mobile login and digital signature-based authorization.
- Demonstrated technical leadership through peer code reviews and company-wide knowledge sharing, briefing tribe leadership and 100 employees on the implementation of Swift's digital-identity and mobile-token solution to enable similar initiatives across teams.
- Selected as an AI-adoption pilot for Swift's Devin Desktop adoption, creating repository-wide configuration standards and proposing a shared prompt library adopted by a 50-developer tribe to support AI-assisted development.

Software Development Engineer (Contract)**January 2025 - June 2025***CargoLabs**Charlottesville, Virginia*

- Designed and deployed a full-stack Managing General Agents portal exposing orders, invoices, and agent management tools, serving 1200+ users.
- Built 20+ AWS Lambda functions for a Serverless architecture covering user authentication, Stripe payment processing, and form validation in a microservices architecture, growing marketplace users 17%.
- Refactored a critical MySQL query powering the agent dashboard that repeatedly exceeded AWS Lambda's 15-minute timeout, reducing execution time from 15 minutes to 30 seconds.
- Automated migration of 100+ Lambda functions to AWS Secrets Manager via custom bash scripts, achieving zero service disruptions and eliminating hardcoded secrets.

Returning Software Engineering Intern**June 2024 - August 2024***Swift**McLean, Virginia*

- Transformed a 13-year-old legacy knowledge portal into a modern and responsive web application with improved UX and navigation, reducing customer support requests by 12.3%.
- Designed and implemented a keyword search feature for improved document navigation, improving user search times from 10 minutes to 1.5 minutes on average.

Software Engineering Intern**June 2023 - August 2023***Swift**Manassas, Virginia*

- Built data analysis and visualization of the performance of the company's central messaging flow, to proactively identify potential system errors, reducing propagated failures by 2.6%.

Software Engineering Intern**June 2022- August 2022***LINQ**Raleigh, North Carolina*

- Refactored 25% of backend API endpoints to enforce input validation and parameterized queries, reducing SQL injection exposure across 20,000 schools' confidential data.

EDUCATION**University of Virginia** School of Engineering & Applied Science**August 2021 - December 2024***Bachelor of Science in Computer Science*

Graduated Summa Cum Laude (GPA: 3.91)
