EXPERIENCE

Software Engineer

July 2025 - Present

Swift

McLean, Virginia

- Led end-to-end development of one of Swift's first cloud-native web applications, translating cross-functional requirements into a solution that reduced quarterly support tickets by 14% since launch.
- Built and owned an automated CI/CD pipeline using Docker, Jenkins, and AWS to deploy and maintain 3 containerized services with high-availability redundancy for a customer-facing application.
- Designed, documented, and implemented an authentication overhaul of an enterprise administrator portal supporting 10,000+ users, modernizing the platform with secure mobile login and digital signature-based authorization.
- Demonstrated technical leadership through peer code reviews and company-wide knowledge sharing, briefing tribe leadership and 100 employees on the implementation of Swift's digital-identity and mobile-token solution to enable similar initiatives across teams.
- Selected as an AI-adoption pilot for Swift's Devin Desktop adoption, creating repository-wide configuration standards and proposing a shared prompt library adopted by a 50-developer tribe to support AI-assisted development.

Software Engineer (Contract)

January 2025 - June 2025

CargoLabs

Charlottesville, Virginia

- Led the release of a new customer portal that centralized business-critical functions to enhance client efficiency and operations transparency, benefiting over 1200 active users.
- Developed and deployed over 12 new services within a fully microservices-based architecture, expanding marketplace functionality and increasing users by 17%.
- Orchestrated the migration of enterprise credentials to AWS Secrets Manager with 0 service disruptions, eliminating potential vulnerabilities and streamlining the company's key-rotation procedures.

Software Engineering Intern

June 2024 - August 2024

Swift

McLean, Virginia

- Transformed a 13-year-old legacy knowledge portal into a modern and responsive web application with improved UX and navigation, reducing customer support requests by 12.3%.
- Designed and implemented a keyword search feature for improved document navigation, improving user search times from 10 minutes to 1.5 minutes on average.

Software Engineering Intern

June 2023 - August 2023

Swift

Manassas, Virginia

- Built data analysis and visualization of the performance of the company's central messaging flow, to proactively identify potential system errors, reducing propagated failures by 2.6%.

Software Engineering Intern

June 2022- August 2022

LINQ

Raleigh, North Carolina

- Refactored 25% of backend API endpoints to enforce input validation and parameterized queries, reducing SQL injection exposure across 20,000 schools' confidential data.

PROJECTS

Fantasy Football Sentiment Analyzer | <https://fantasy-football-sentiment-analyzer.vercel.app>

July 2025 - May 2026

- Designed and implemented a full-stack fantasy football analytics tool that aggregates sentiment on NFL players from social discussion, built with Next.js, TypeScript, & Tailwind frontend and a Flask backend.
- Architected an end-to-end NLP pipeline that isolates NFL players' mentions via Named Entity Recognition and fuzzy matching, then classifies sentiment using a zero-shot entailment model.
- Benchmarked ML models for entity extraction and sentiment classification, and then tuned the pipeline to reduce analysis times from 5 minutes to 40 seconds.

ChitChief API | <https://chitchief.up.railway.app/docs>

March 2026 - May 2026

- Developed a ticket sales backend that was verified to sustain 500+ concurrent users under load testing.
- Leveraged distributed locking using Redis with Lua and retry jitter, guaranteeing no seat could be double-booked under concurrent purchase attempts.
- Built a custom authentication service with signed access tokens to emphasize security, and implemented idempotent payment processing to prevent duplicate charges on retries.
- Validated reliability with 226 unit tests, 101 end-to-end tests, and 3 load-test scenarios covering peak-traffic seat contention.

SKILLS

Languages	Java, Python, JavaScript, TypeScript, C, C#
Frameworks & Platforms	React, Next.js, Spring Boot, Django, Flask, Angular, AngularJS, .NET
Cloud & DevOps	AWS ECS, AWS Lambda, AWS Cognito, AWS Secrets Manager, AWS S3, Docker
Databases & Messaging	PostgreSQL, MySQL, SQLite, MongoDB, Firebase, Redis, BullMQ

EDUCATION

University of Virginia School of Engineering & Applied Science	August 2021 - December 2024
Bachelor of Science in Computer Science	
Graduated Summa Cum Laude (GPA: 3.91)
